Education

Indian Institute of Technology Bombay *2021 – 2025*
B.Tech in Computer Science and Engineering **CPI: 8.31/10**

Experience

Temple *Jan 2026 – Present*
Software Development | Full-Time | Go

- Working on a **real-time L2 metric computation pipeline** to derive multiple user-level metrics from device-generated L1 data.
- Added **recomputation support** for user data, including admin-triggered workflows to regenerate data using available user history.
- Developed latency-optimized backend APIs and asynchronous worker flows, leveraging **caching, database optimizations, distributed tracing, debugging events, and alerting** to improve performance and service observability.

Dream11 *August 2025 – Jan 2026*
Software Development | Full-Time | Java, TypeScript

- Dockerized the entire **CodePush Server** and wrote automated API tests to improve deployment consistency, coverage, and reliability.
- Added a new API for updating release details and fork-out time in **Delivr**, improving release management.
- Migrated **Pulse** analytics from **BigQuery** to **ClickHouse** to reduce infrastructure costs and added APIs to collect more detailed session analytics.
- Implemented a Sampling Configuration API for SDK-based OpenTelemetry sampling.

Jaguar Land Rover *May – July 2024*
Software Development | Company Internship | Python

- Automated data extraction from **GitLab, Jira**, and **Snyk** using APIs and **GCP Cloud Functions** for the SDV project.
- Created **Tableau dashboards** to visualize data insights, linking Jira tickets with GitLab commits for analysis.
- Leveraged **Microsoft Phi-3** for suggestions, code ratings, and tracking requirements completion in Jira and GitLab.

Key Projects

Fake News Detection *Sept – Oct 2023*
Guide: Prof. Pushpak Bhattacharyya | Course Project: Natural Language Processing *IIT Bombay*

- Implemented a **fake news detection** model using statistical, neural, and external text classification features.
- Enhanced **stance detection** by integrating skip-thought vectors, TF-IDF, and heuristic-based external features.
- Optimized the model with cross-entropy loss, classifying news into agree, disagree, discuss, and unrelated.

xv6 Optimization *Sept – Oct 2023*
Guide: Prof. Purushottam Kulkarni | Course Project: Operating Systems *IIT Bombay*

- Developed advanced **system calls** and process scheduler algorithms in xv6 for improved performance.
- Implemented **lazy page allocation** with page fault handling in the xv6 memory management system.
- Implemented **threading, synchronization mechanisms**, and filesystem operations for concurrency in xv6.

IPCP Prefetcher for Spec and Graph Workloads *Apr – May 2023*
Guide: Prof. Biswa | Course Project: Computer Architecture *IIT Bombay*

- Obtained an average **1.05x speedup** in IPC on various traces by enhancing the IPCP prefetcher using **ChampSim**.
- Increased cache hit rates and prefetch accuracy through customized modifications to the IPCP prefetcher.

Achievements

- Secured **All India Rank 232** in **JEE Advanced** among over 150 thousand candidates *(2021)*
- Achieved **All India Rank 436** in **JEE Main** among over 1.2 million candidates *(2021)*
- Secured **State Rank 48** in AP-EAMCET and **State Rank 185** in TS-EAMCET *(2021)*
- Secured **All India Rank 364** in **KVPY** among over 50 thousand candidates *(2020)*

Technical Skills

Programming: Python, C++, Java, Assembly, Go
Web Development: React, React Native, JavaScript
Software: Git, LaTeX, GDB, Sphinx, Doxygen, Jupyter, Docker, Wireshark, GitLab, Jira, Snyk
Packages: NumPy, Matplotlib, FLTK, Pandas, Torchvision, PyTorch
